

Patrick McCreery

4930 Meredith Way
BLDG. 04 APT. 304
Boulder, CO 80303

(720) 326-6436
patrick.mccreery@colorado.edu
REU Website:
<http://solar.physics.montana.edu/reu/2021/mccreery/>

Research Interests

Planetary system formation
Planetary atmospheres (formations, dynamics, escape)
Exoplanet atmospheres and detection
Machine learning applications in general

Solar flares and magnetic reconnection post-flare
Solar variability & terrestrial impacts
Star formation
Science education and outreach

Education

University of Colorado, Denver 2017-2018

Dual-Enrollment

University of Colorado, Boulder 2018-2022

B.A., Astronomy, Astrophysics and Planetary Science emphasis, May 2022 (*Expected*)

Minor, Applied Mathematics, Statistical emphasis

Cumulative GPA: 3.99/4.0

Astronomy/Physics GPA: 4.0/4.0

Thesis (in progress): *Fourier Filtering using Machine Learning*

Computer and Technical Skills

Computer Languages	Python, IDL, HTML, Basic JavaScript
Software & Tools	L ^A T _E X, Mathematica, MATLAB, Microsoft Suite

Research Positions and Projects

Resolving Source Solar Acoustic Oscillations - Lab of Atmospheric and Space Physics (April 2020-present)

Building upon the work of [McClure](#), [Rast](#), and [Pillet](#), I used Fourier Transforms to resolve solar acoustic oscillations and separate these from the surface granulation. Upon resolving and separating the p-modes and granulation, I am now training a machine to separate these two components without requiring a time series. Ongoing project with a hopeful publication and honors thesis upon completion.

Simulating Solar Flares - Montana State University (summer 2021, REU)

As part of an REU Program, I simulated solar flares post-magnetic reconnection using magnetosonic shocks. Attempted to resolve magnetic field retraction velocity inconsistencies of previous work. The observed and simulated retraction velocities were inconsistent in previous work, however, my work introducing aerodynamic drag to the simulation could not resolve these inconsistencies, opening opportunity for alternative solutions to heating of loop-top ridges post-reconnection.

Detecting and Characterizing Trans-Neptunian Objects (Research Methods in Astronomy)

As part of the Research Methods in Astronomy course taken in spring of 2020, I took part in helping resolve, analyze, and characterize the shapes of occultation targets observed by RECON (Research and Education Collaborative Occultation Network). The organization had data from occultation events of objects in the outer solar system to analyze. We used Python and IDL to identify the target star that a TNO may occult and analyze if the object occulted the star. The analysis was then used to characterize the shape of the TNO.

Relevant Coursework

Physics

Classical Mechanics I/II
Electricity and Magnetism I/II
Quantum Mechanics I/II
Thermodynamics and Statistical Mechanics[†]
Experimental Physics I/II

Astronomy Courses

Planetary Atmospheres and Geology
Plasma and Space Physics[†]
*Planetary Surfaces and Interiors**

Mathematics

Calculus, Differential Equations Sequences
Matrix Methods and Applications
*Fourier Series and Boundary Value Problems (PDEs)**
Applied Probability & Statistics Sequences[†]
Matrix Methods and Linear Algebra

Astrophysics I

Data Analysis and Research Methods in Astronomy
Mountain Geography

[†] indicates current enrollment

* indicates a graduate level course

Leadership, Volunteer, and Other Positions

CU STARS (2019-)

The Astrophysical and Planetary Sciences describe CU-STARS (Science, Technology and Astronomy Recruits) as “a University of Colorado program to support students from all backgrounds interested in space.” I began loosely participating in 2019 as part of a program to host a campus wide star party, where I helped put together and use telescopes at the star party, as well as explain the object(s) in view and answer questions that attendees might have. In 2020, I began attending meetings more regularly, helping plan, develop, and present topics in astronomy to underrepresented and rural schools in Colorado.

Resident Advisor (2019-2020)

For the 2019-2020 school year, I worked as a resident advisor in the CU dorms, helping incoming freshman transition into college life. Work duties involved keeping in touch with each resident, putting on programs that kept students engaged in the communities, and being “on-call” for potential issues and crises that may arise in the residence halls. I left the position in 2020 due to concerns regarding COVID-19.

Applied Mathematics Writer (2019-)

In 2019, I joined the Applied Mathematics Department at CU, writing columns and news articles that post to the applied math website (amath.colorado.edu). I created and edited the yearly newsletter, maintained portions of the applied math website, and helped the IT specialist, office manager, and undergraduate coordinator.

CubeSat Project Member – Colorado Space Grant Consortium (2019)

For the spring semester of 2019, the Colorado Space Grant Consortium brought together students from all STEM fields to work on CubeSat projects that would ascend through Earth’s atmosphere on a weather balloon. As part of the project, we designed, built, tested, and launched a project relevant to an ascending balloon. The team chose a project analyzing pressure, temperature, and solar flux with altitude in the atmosphere. I helped conceptualize the project, build the structure of the cube, test the GoPro fixed to the cube, and analyze the collected data.

Presentations and Posters

McCreery, P. & Longcope, D. (2021). Thin Flux Tube Retraction Following Reconnection as a Model for the Observed Hot, Loop-top Ridge Structure in a Two-ribbon Flare. *In preparation for Fall AGU conference.*

Awards and Scholarships

Charles A. Barth Scholarship (2021)

Research scholarship promoting student projects in the Lab for Atmospheric Space Physics. Given based on quality of classwork, previous work, and proposed work.

Theodore Snow Undergraduate Scholarship (2021)

Scholarship given to undergraduates in the Astrophysical and Planetary Science department “in order to recognize the student’s academic performance in coursework and research”

Dean’s List (2018 - present)

President James H. Baker Scholarship (2018 - present)
